

PANORAMA ANTENNAS FIGHTING CRIME WITH TENNESSEE HIGHWAY PATROL

Tennessee Highway Patrol, Nashville, TN is a multi-faceted law enforcement agency for the entire state of Tennessee, with several hundred marked patrol cars. THP was using 9 different antennas from Low Band to 800MHz, High Speed LTE Data, GPS, Scanner to monitor other radio traffic. Since choosing the Panorama Sharkee™ [GPSB], THP have been able to reduce the number of holes drilled in the vehicle [for antennas] to 3, where the Sharkee™ replaced 7 individual antennas. The Sharkee™ solution was especially attractive to THP as they were transitioning from the discontinued Ford Crown Victoria Police Interceptor, to the Chevrolet Malibu P.I. which has less surface area to mount antennas.

Panorama is supplying a Sharkee™ with a Trident™, tri-band antenna whip. THP is connecting three separate radios; VHF, UHF & 7/800 using a Triplexer. The Wi-Fi antenna & Cellular/LTE antenna is being utilized and the GPS antenna is split using our DPD-GPS.

To date, Panorama have supplied this solution for 100+ vehicles that are currently patrolling the interstate highways in Tennessee.
